

Netwrix Endpoint Protector

Empowering Your Endpoints with Data Protection

Netwrix Endpoint Protector is an advanced enterprise-grade Data Loss Prevention (DLP) solution. It was built to protect sensitive data from unauthorized sharing and malicious extraction from employee endpoints. The software enables organizations across various highly regulated industries to meet data compliance requirements. It also aims to mitigate operational disruptions and financial losses that can occur from data breaches caused by accidental loss and insider threats.

PREVENT SENSITIVE DATA LEAKS

Proactively detect and block sensitive data transfers with continuous monitoring of email clients, web browsers, messaging apps, file uploads, and more.

ENFORCE DEVICE SECURITY POLICIES

Implement granular device control policies, restricting data transfers to peripheral devices such as removable storage, printers and Bluetooth devices, even when the endpoint is offline.

COMPLY WITH DATA PROTECTION POLICIES

Protect Intellectual Property (IP), Personally Identifiable Information (PII) and more to achieve compliance with standards like HIPAA, PCI DSS, and GDPR, minimizing regulatory risks.

CUSTOMER FEEDBACK

“We have tried many security products, but Endpoint Protector is best of breed for data loss prevention (DLP) that easily integrates into Windows, MacOS and mixed multi-OS environments.”

Brian Bloom,
CTO Multipoint Network

Key features of Netwrix Endpoint Protector

CONTENT-AWARE DATA LOSS PREVENTION (DLP)

Contextual scanning identifies sensitive data at rest, in motion, and in use, preventing unauthorized sharing and data leakage from employee endpoints.

GRANULAR DEVICE CONTROL

Enforces strict access control and DLP policies for removable media, USB devices, and external storage, minimizing data leaks.

HOW IS NETWRIX ENDPOINT PROTECTOR DIFFERENT?

UNMATCHED SECURITY DEPTH

Netwrix Endpoint Protector provides data protection across all endpoints, safeguarding sensitive data through multiple layers of security.

ENFORCED ENCRYPTION

Securely encrypts sensitive data being transferred to approved USB storage devices, to protect it in the event of device theft or loss.

DATA DISCOVERY FOR ENDPOINT DATA

Provides comprehensive data discovery capabilities for easily locating, encrypting, or remotely removing sensitive data stored on endpoints.

EASE OF USE AND DEPLOYMENT

Deploys seamlessly on Windows, macOS, and Linux endpoints, ensuring effortless integration into existing IT infrastructure.

CENTRALIZED MANAGEMENT

Simplifies endpoint security management through a centralized dashboard, enabling real-time monitoring, policy enforcement, and reporting.

CROSS-PLATFORM SUPPORT

Netwrix Endpoint Protector offers multi-OS support, providing feature and policy parity for computers running on Windows, macOS and Linux.

ADAPTABLE TO DIVERSE ENVIRONMENTS

Supports a wide range of enterprise environments, including multi-domain, hybrid cloud, and remote workforce scenarios.

ROBUST REPORTING AND ANALYTICS

Provides detailed reports and analytics to gain insights to identify potential threats, and optimize security policies.
