Netwrix Recovery for Active Directory

Browser-based rollback and recovery of Active Directory data

Netwrix Recovery for Active Directory safeguards your Active Directory by enabling quick rollback of objects, attributes, and more to a known good state—without downtime. This comprehensive solution handles everything from AD objects and group memberships to DNS entries and GPOs, addressing the limitations of the AD Recycle Bin. In case of a major incident, Netwrix Recovery for Active Directory provides automated AD forest recovery to get your vital identity system — and your business — back up and running.

AVOID SECURITY BREACHES AND DATA LOSS

A single improper change to an Active Directory group or Group Policy object can open the door to a data breach. Rest easier with granular rollback at your fingertips.

MINIMIZE USER DOWNTIME AND FRUSTRATION

AD is key to user access. Reduce disruptions by restoring accounts and permissions swiftly, without rebooting a single DC. In a forest-wide disaster, rely on automated AD forest recovery to bring your environment back to life.

SPEED TROUBLESHOOTING AND REMEDIATION

Instead of struggling with native tools, simply search a full history of all changes made to an AD object and restore it to the recorded state of your choice in a single click.

CUSTOMER FEEDBACK

"I can work in AD and make changes without worrying about the lasting impact of an accidental deletion or change."

IT Director
Mid-sized communications organization

Take the worry out of AD management

Key Features of Netwrix Recovery for Active Directory

AD FOREST RECOVERY

Gain peace of mind knowing that even if your domain controllers are corrupted or encrypted by ransomware, you can automatically restore your entire AD forest, reducing downtime and ensuring business continuity

QUICK AND FLEXIBLE ROLLBACK

In a single click, seamlessly roll back unwanted changes to any recorded state, whether that's the last backup or an older one.

ROLE-BASED ACCESS CONTROL

Delegate authority with confidence by limiting the actions each Netwrix Recovery for Active Directory admin can perform.

STRONG SECURITY

Meet security and compliance requirements by restricting console access to the specific ports you choose and limiting communications to HTTPS.

COMPLETE OBJECT RECOVERY

Unlike the AD Recycle Bin, objects recovered with Netwrix Recovery for Active Directory are fully reanimated with all attributes, group memberships and settings, including SID-History.

ADVANCED SEARCH

Search detailed information on any individual object with a full historical timeline of any and all changes made to the object since it was first observed.

EASY ADMINISTRATION

Save time by performing backup and recovery tasks from ADUC using a fully integrated MMC snap-in.

TRACKING AND ROLLBACK OF PERMISSIONS CHANGES

Track Access Control List (ACL) changes and promptly roll back any modifications that could give users excessive permissions or remove rights they need to do their jobs.

CONTROL OVER SNAPSHOTS

Govern exactly when Active Directory backups are performed to meet your recovery point objectives (RPOs) and other needs.
